

I am a very strong supporter of satellite radio- and a very big opponent of local radio. Why? Simply because with local radio, I have no choices. I have to listen to what they provide, nothing else. Yes... it is "Free", though I am forced to listen to more commercials and verbal garbage than content. Not only that, but they have nothing to offer in my city- Jacksonville, Florida- a town of over 1 million population- that I remotely want to listen to. Traffic reporting??? I drive to work on a road that approximately 20 thousand people drive to and from work on... a 2 lane road leading into a major Naval installation. It very typically takes 30 80 minutes to drive FOUR MILES! Does any local radio provide traffic reports of this road? NO... I have written them- called them- to no avail. I have also called as well as written my local PBS affiliate, WJCT about the excesses of talk radio in their programming- and the lack of any musical variety. To no effect. In other words, commercial radio is totally unresponsive to my needs- unable to provide for my needs- and could care less. Yet- for \$10.00 per month, I can have total and full access to the programming I want. You figure it out. Music is extremely important in my and my wife's lives. Which would you support??? Please, do not ever stop listening to the people. Lobbyists do NOT represent the people... only \$\$\$\$\$\$ interests. This country used to be "For The People"...

Respectfully-

Warren W. James
